

Dear Professor Rebelo,

I am writing to apply for a postdoctoral position in Centro de Fisica Teorica de Particulas (CFTP) of Instituto Superior Tecnico (IST), Lisbon, Portugal.

My research is focused on predictions from supersymmetric (SUSY) grand unified theories (GUTs). I have shown in my research how one may obtain information about the underlying (high energy) GUT theory by studying the (low energy) physics at the Large Hadron Collider (LHC) and in light of direct and indirect detection of dark matter.

Prof. Qaisar Shafi
