Re: letter for **Aurora Meroni**

Dear Colleagues,

I am writing this letter for Aurora Meroni who is applying for a postdoc position at your institution. Aurora has been a PhD student of Serguey Petcov at SISSA. I have co-authored a manuscript with her and Petcov based on a study of rare lepton flavor violating charged lepton decays in the SUSY $SU(5) \times T'$ that Professor K.T. Mahanthappa and I proposed recently. While this is a very straightforward calculation, it nevertheless provided Aurora the opportunity to learn grand unified models. Aurora seems to be a motivated student and it would be good if she can have the opportunity to further develop her model building skills.

I thus recommend Aurora Meroni for a postdoctoral research position at your institution.

Sincerely,

Mu-Chun Chen
Associate Professor of Physics
