Letter of Reference for Axel Orgogozo

I have known Axel Orgogozo since about 2 years. Axel is a PhD student of Slava Rychkov who is professor at ENS in Paris and my collaborator. Although I never collaborated with Axel on any physics project, we have had some interactions during my weekly visits at ENS.

Axel showed himself as a hard-working and devoted student. His research during PhD was focusing on electroweak symmetry breaking with strongly coupled sectors, and resulted in 2 papers (1111.3534 and 1211.5543) dealing with the S and T parameters in Higgsless and composite Higgs models. These very interesting papers, approaching the problem in a general fashion using sum rules and dispersion relations, prove Axel's very good computational skills and mastering of the subject.

I regard Axel's academic and research abilities as good. Moreover, Axel is a very friendly person that should fit well into any team. In my opinion, his very good physics education and computational skills make him a good candidate for a postdoc in a theoretical particle physics group.

Sincerely,
Adam Falkowski
